

AMA unveils XE Data Locker API: Enhancing Data Accessibility and AI-driven Analysis

AMA CORPORATION PLC (« AMA ») (ISIN GB00BNKGC5 – mnemo ALAMA), publisher and integrator of secure productivity applications designed for connected mobile workers, is excited to announce the launch of its XE Data Locker API. This state-of-the-art technology offers the capability to securely store all data generated during an XE aR or XE aR+ session in a dedicated folder for a predefined period, with the provision that the data can be retrieved by authorized parties.

This API is designed to cater to the evolving needs of businesses in data management and utilization. During any XpertEye (XE) session, participants generate a wealth of information, including video, sound, pictures, annotations, and chat messages. The XE Data Locker API ensures that this data is not only securely saved but is also readily accessible to authorized parties, including Artificial Intelligence (AI) tools.

Key features of the XE Data Locker API include:

- **Secure data storage:** All data generated during an XE session is stored in a unique, secure folder.
- **Authorized retrieval:** Data in the folder can be retrieved by authorized parties only, ensuring secure and controlled access.
- **Interoperability:** The API is designed to be fully interoperable with customers' existing Enterprise Resource Planning (ERP), Information Systems (IS), or any AI-powered solution.
- **Tag-based organization:** Data can be tagged for ease of identification and retrieval, streamlining the process of locating specific information.

The introduction of the XE Data Locker API is a response to the growing demand for extensive data integration into customers IS. With this feature, XE empowers its customers to exploit the data generated during each session fully, whether for analytical purposes, decision-making, or enhancing AI-driven processes.

"We are thrilled to launch the XE Data Locker API, a tool that ensures data security and enhances data usability," said Guillaume Campion, VP of Product & Partnerships at AMA. "This launch marks a significant milestone in our commitment to providing advanced, user-centric solutions that meet the dynamic needs of businesses today."

The XE Data Locker API is now available to all XE users as well as to any AI engine, promising a more integrated, efficient, and secure usage of relevant data.
